

Engineer Research & Development Center

Dr. Sarah Becker is a physical scientist with the Engineer Research and Development Center at the US Army Corps of Engineers (USACE) in Alexandria, VA. She joined the US government in 2006 and served as a political analyst and image scientist, and most recently moved to USACE in 2014. She specializes in spatial statistics and remote sensing and uses her background to address spatial issues involving the environment and conflict on a tactical level and to map agriculture and urban features. She collaborates with multiple US Government agencies, including the US Department of Agriculture. She received her PhD in Environmental Health, Science, and Policy from the University of California, Irvine.
